

IN THE ABSTRACT

Please add the following Abstract at the end of the Specification as follows:

ABSTRACT

An anti-loosening bolt assembly having a setscrew with an external screw on its outer periphery, a lock bolt having an external screw with the same pitch as the screw of the setscrew, and an axial end which is engaged with an axial base of the setscrew. One of the axial base of the setscrew and axial end of the lock bolt has a conical protrusion part, with the other having a first concave part, with which the protrusion part is engaged. An outer peripheral surface of the protrusion part and an inner peripheral surface of the first concave part are slightly eccentric.
